

## Resource List & Tech Notes

1. **Jetstream2** – Students will use Jetstream2 virtual machines to access cloud-based computing environments where they can write, execute, test, and debug Java programs without relying solely on local computers.
2. **JupyterHub/Jupyter Notebooks** – Students will use browser-based Jupyter environments to create reproducible programming and data analysis activities, document their code, and visualize results.
3. **AI/Generative AI Tools** – Students will use AI as a programming learning partner to generate examples, explain code, identify and debug errors, and compare AI-generated solutions with their own solutions while evaluating accuracy, bias, and responsible use.
